Ako je ko skinija gornje dvd-ove mo¼e napraviti sljedeæe:

Ovom skriptom:

```
#!/bin/bash
```

```
#sudo umount /media/dsk2/m
```

```
#sudo losetup -d /dev/loop0
```

```
for (( aa=1; aa<9; aa++ ))
```

```
do
```

```
sudo mount /media/dsk2/lucid/*dvd$aa*.iso /media/dsk2/m -t iso9660 -o rw,loop=/dev/loop0
```

```
#read
```

```
cd /media/dsk2/m
```

```
cd pool
```

```
for (( a=1; a<5; a++ ))
```

```
do
```

```
if [ $a == 1 ]
```

```
then
```

```
fl="main"
```

```
fi
```

```
if [ $a == 2 ]
```

```
then
```

```
fl="universe"
```

```
fi
```

```
if [ $a == 3 ]
```

```
then
```

```
fl="multiverse"
```

```
fi
```

```
if [ $a == 4 ]
```

```
then
```

```
fl="restricted"
```

```
fi
```

```
cd $fl
```

```
ls | while read fu
```

```
do
```

```
cd $fu
```

```
ls | while read fun
```

```
do
```

```
cd $fun
```

```
find . | while read f
```

```
do
```

```
k=`echo $f | grep -i "$".deb`
```

```

    if [ "$k" != "" ]; then
v=`ls -dl $f`
#echo $v
v=$(echo ${v:0:1})
#echo $v
if [ "$v" = "-" ]
then
    cp -v "$f" "/media/dsk2/repo"
fi
fi
done
cd ..
done
cd ..
done
cd ..
done
cd ..
done
cd ..
done
sudo umount /media/dsk2/m
sudo losetup -d /dev/loop0
done

```

prebaciti sve deb pakete u direktorij repo Naravno prilagodite putanju svom sustavu. Uđete u repo i
kucnete dpkg -i dpkg-dev

Javiti æe nezadovoljene uvjete ali nema problema. Zatim kucnete

```
dpkg-scanpackages . /dev/null | gzip -9c > Packages.gz
```

To traje jako dugo. Zatim kopirajte sources list u drugi file a u orginalni stavite samo
deb file:/media/dsk2/repo ./

zatim apt-get update i nakon toga sa apt-get install -f zadovoljiti spominjane ovisnosti.

Nakon toga sve 1ta vam treba instalirate iz repo direktorija i niste ovisni o netu.
